Coalition®

Coalition is now offering security awareness training to help policyholders reduce risk, stay compliant, and save money.

Over 90% of security incidents are caused by human error. Coalition's partnership with **Curricula** trains policyholders to avoid these errors with engaging, story-based content and simulated phishing emails.

Reduce Risk
Brief, informative training and simulated phishing tests help policyholders avoid breaches and loss.

Stay Compliant
Most industry compliance frameworks – like HIPAA, PCI-DSS, and NERC CIP – require basic security training.

Save Money
Active use of security awareness training reduces an insured's premium at renewal (automatically applied if they use Curricula).

Curricula

Why Curricula?

Coalition demoed dozens of training vendors before selecting Curricula. We chose Curricula because their content is simple, engaging, and story-based – all qualities that make it far more effective than dry, lengthy, "Death by PowerPoint" alternatives.

In addition, Curricula gives Coalition policyholders a great deal: 15 free licenses for the full platform and all content, with additional employee licenses available at a heavy Coalition-negotiated discount.

What's Involved

Curricula's security awareness program delivers a series of short episodes throughout the year to train policyholders how to defend against today's most common security threats, including phishing, passwords, ransomware, social engineering, and more.

Curricula also offers simulated phishing tests that help train policyholders to dodge real-world attacks. Users who click on these simulated links will be directed to a Curricula training module, and admins can view click rates on each campaign through their Curricula dashboard.

Policyholders can sign up through their Coalition dashboard at **platform.thecoalition.com**
